

Recycling Makes a Difference in Georgia

Recycling is good for the environment and good for Georgia's economy

- Paper mills use 40% less energy to make paper from recycled paper than they do making paper from virgin timber. (Dept of Energy)
- A ton of paper made from recycled fibers conserves 7,000 gallons of water (DOE)

Recycle 4 Our Economy

Georgia has strong markets for recyclables

Georgia's Paper Industry:

- Recycles almost 8% of all the paper consumed in the United States
- Includes 16 paper mills using recycled content, 9 relying exclusively on recycled fiber

Plastic Beverage Containers (PET)

- 1/3rd of all Plastic Beverage Containers recycled in N. America get recycled in Georgia – turned into carpet

Aluminum Recycling

- Novelis, one of the largest aluminum recyclers in the world, processes used beverage cans in Greensboro GA, with its North American headquarters located in Atlanta

Glass Recycling

- 3 Manufacturers in the state use recycled glass to make new glass products

Recycle 4 Georgia

We need to recycle: Paper, Glass, Metal, and Plastic

Georgians annually throw away an estimated:

- 1.9 million tons of paper a year
- 1.0 million tons of plastic
- 360,000 tons of metal
- 240,000 tons of glass

If we recycled just 1.7 million tons of the aluminum, paper, glass, and plastic thrown away annually in Georgia, we would:

- Conserve 4% of the total energy consumed annually within the state or the equivalent of the transportation energy consumed by over 1,000,000 Georgians each year; and
- Conserve over 7 million barrels of oil calculated at an annual savings of almost \$700 million.

The energy and commodity values alone represent over a billion dollars a year in potential market value in Georgia.

Recycle 4 You!

Individual action does make a difference.

Did you know that recycling can save enough energy to offset the energy you consume to light a room, run a computer, and watch TV? It can even offset the water you use in your shower!

- Recycling 1 glass bottle will save enough energy to light a 100-watt light bulb for 4 hrs
- Recycling 1 aluminum can will run a computer for 3 hours
- Recycling 1 soft drink bottle will save enough energy to run a TV for 1 ½ hours; and
- Recycling 5 lbs of paper will conserve enough water to "offset" the water used in a typical shower.
